

Compliance Assessment

The ProductIP platform has several build-in tools that help you to assess the compliance level of the product.

We have assigned a requirement category to each requirement. The category DOC, A, B1, B2 and B3 are the requirements for which market surveillance authorities would like to see evidence. A graph gives you instant overview per category. Which requirements have been signed off, are pending, are declared Not Applicable or are still unfulfilled.

Select requirement category:

DRAFT FILES

The same status is visible in the overview of all technical files in draft status.

FINAL FILES

These files are checked on a weekly basis. We are looking 90 days ahead and check if requirements have been modified or new ones added or if, based on meta-data, documents are no longer valid.
